

World War 2 – UHF Signal Generator GIVEAWAY!

WW2 era UHF signal generator that I can no longer house and is a giveaway to anyone interested. From the photos you can see the beautiful engineering both mechanical and electrical to achieve a 600MHz generator at that time. Unfortunately, if a home is not found for this piece it will sadly be dismantled for scrap with only a few components retained. For your information, the unit weighs almost 28kg.
